

Gabriel Paredes Mendoza

FULL STACK DEVELOPER

Perth, Australia • (+61) 415 530 419 • gabrielparedesmendoza@gmail.com • [linkedin.com/in/geparedesm](https://www.linkedin.com/in/geparedesm)

SKILLS

Soft

Communication, Networking, Problem-Solving, Teamwork, Adaptability, Motivation, and Initiative.

Program Language

Dart, Python, JavaScript, TypeScript, React, React Native.

Frameworks

Flutter, React Native, Flask, Django, Vite, Expo Go, Expo Application Services

Tools

Docker, Kubernetes, Elasticsearch, Logstash, Kibana, FileBeats, Skia

Language

Spanish (Native), English (B2)

PROFESSIONAL EXPERIENCE

Duodata, Ecuador • Full Stack Developer • 12/2021-01/01/2025

Project: Customised ERP Modules for the Ecuadorian Navy

Technology: Odoo, Python, PostgreSQL

Description: Developed customised modules with Odoo's ERP to optimise the resources of the Ecuadorian Navy. The modules were designed to streamline operations, enhance decision-making, and improve resource allocation. The project involved integrating the modules with existing systems, ensuring seamless data exchange and minimising manual errors.

Project: Elasticsearch Data Warehouse

Technology: Docker, Python, Elasticsearch, Logstash, Kibana, FileBeats

Description: A centralised data repository, specifically a log data warehouse, aggregates and consolidates data from various sources, including antivirus software, firewall systems, and agent-based monitoring tools. This comprehensive data collection enables the generation of graphical representations and alerts, facilitating real-time monitoring and analysis to predict cyberattacks.

- Develop a Python script for ingesting SOPHOS events and alerts
- Develop a Python script for automated PDF report generation, incorporating Elasticsearch data
- Develop custom Kibana plugins for PDF report creation, distribution, and administration
- Build custom plugins for automating firewall configuration and management on FortiGate firewalls
- Implement FileBeat pipeline for ingesting FortiGate firewall data into Elasticsearch
- Implement FileBeat pipeline for ingesting CISCO firewall data into Elasticsearch
- Develop a custom FileBeat pipeline for ingesting PostFix
- Develop a custom Kibana plugin for efficient migration of dashboard, canvas, and alert templates across spaces
- Develop a Logstash module for triggering webhook and email notifications based on event data
- Implement minios to backup Elasticsearch data
- Migrate the stack version from 8.4.2 to 8.6.2
- Migrate the stack version from 8.6.2 to 8.14.2

Project: ZKTeco

Technology: Flutter, Docker, Python, Flask, Node.js y MySQL

Description: An administrative panel designed for seamless communication with ZKTeco biometrics devices. It enables efficient user management, generates detailed logs, and facilitates remote door control.

- Foster a collaborative work environment through effective communication and networking, ensuring seamless integration and coordination across multidisciplinary teams, leading to a 40% improvement in system efficiency.
- Utilisation of ZKTeco's proprietary protocol for efficient bidirectional communication with biometrics devices, controlling 100% of the functionalities of the devices.
- Development of 3 microservices using Flask (*API Rest*), Python (*Command generator*) and Node.js (*Database synchronisation*), resulting in a 30% reduction in response times.
- Coding of a Python script to capture user photos and save them to biometrics security devices, enhancing data processing speed by 25% and reducing error rates by 15%.
- Multiplatform application (*Web, Android, iOS*) using Flutter.
- Unit testing for applications in Flutter, achieving 90% test coverage and reducing bug occurrence by 35%.
- Implemented Continuous Integration and Continuous Deployment (CI/CD) pipelines, reducing deployment time by 50% and decreasing integration issues by 40%.

Project: The Hit

Technology: React Native, Expo Go, Expo, ESLint.

Description: Social network for music enthusiasts that enables users to share their favourite tracks and interact directly with their favourite artists through chat.

- Leveraging strong communication and teamwork skills to coordinate with developers and designers, successfully scaling the app to over 30,000 active users (Android and iOS) and enhancing user engagement through seamless interaction and optimal search results.
- Utilise Redux-Saga to cut the average handling time of asynchronous operations, such as API calls, by 15-25%
- Using ESLint in conjunction with tests can reduce bugs by up to 30%.
- Implementation of an algorithm for obtaining contact metadata and relationship management with application users, optimising search results by 10% by linking them with the preferences and interests of the people in the contact list.

Project: Frecuento

Technology: React Native, Expo Go, Expo, ESLint.

Description: A mobile application that enables users to browse products and make purchases using a credit card.

- Utilising my networking and teamwork skills to foster strong relationships within the team, facilitating the seamless integration of features and contributing to the app's success with over 10,000 active users on Android and 15,000 on iOS.
- Implemented MVC (Model-View-Controller) architecture, resulting in a 30-40% reduction in the number of lines of code in controllers and views compared to a monolithic architecture.
- Utilise Redux-Saga to achieve a reduction of 20-30% in the lines of code associated with asynchronous operations and state management.
- Using tests with ESLint can potentially lower maintenance costs by 15-25%.

GP-Developer, Ecuador • Full Stack Developer • 02/2018-12/2021**Project:** GP-Security

Technology: Flutter, Firebase, Docker, Terraform, AWS, Python, Flask, Microcontroller.

Description: An administrative panel designed for seamless communication with location devices. It provides real-time location tracking, location history, remote engine locking, window control, virtual fencing, two-way communication, and alerts for engine starts, battery disconnections, and door openings.

- Utilisation of CanTrack's proprietary protocol for efficient bidirectional communication with location devices, standardising the communication between proprietary development devices and imported devices, and achieving a 25% increase in data transmission reliability.
- Development of 2 micro services using Flask (*API Rest*) and Python (*Multithreaded TCP*), resulting in a 35% improvement in processing speed and a 25% reduction in system latency.
- Multiplatform application (*Web, Android, iOS*) using Flutter, achieving a 30% faster time-to-market and a 20% increase in user engagement across all platforms..
- Implemented MVC (Model-View-Controller) architecture to achieve a 10-20% improvement in application load time through optimised code separation and reduced coupling.
- Performed unit and widget testing for applications in Flutter, achieving 95% test coverage and reducing post-release bugs by 40%.
- Implementing animations with Rive in Flutter, resulting in a 50% reduction in animation rendering time and a 30% increase in user interaction engagement.
- Microcontroller programming (*ATmega, SIM Com, Espressif*)
- Demonstrating initiative by implementing innovative solutions, such as Continuous Integration and Continuous Deployment (CI/CD) pipelines, reducing deployment frequency by 60% and cutting downtime by 40%.

EDUCATION

2025 – ICT60220 Advanced diploma of information technology (Telecommunications Network Engineering) – National Institute of Technology, Australia

2024 – ICT50220 Diploma of Information Technology (Cybersecurity) – National Institute of Technology, Australia

2014 – 2019 – Mechatronic Engineering – Universidad Técnica del Norte, Ecuador

VOLUNTEERING**Institute of Electrical and Electronics Engineers**

- Leading global public relations efforts for IEEEExtreme 2017 – 2021, successfully enhancing the competition's visibility and engagement worldwide through strategic communication and outreach, significantly increasing participation and fostering a vibrant community of competitive programmers.

Ovideo High school

- Taught robotics and programming to high school students, subsequently preparing them for a national competition where they secured a second-place finish

National Institute of Technology

- Taught technology to seniors in some suburbs of Perth.

CERTIFICATION

CCNA Switching & Routing – CISCO, USA

Ethical Hacking and Penetration testing – Green Ethics, Ecuador
